ABOUT

I'm a Computer Engineering senior and Civil Service Professional specializing in DevOps and server infrastructure, with a solid networking foundation backed by Cisco Networking Academy certifications (Networking Basics and Networking Devices & Initial Configuration). Experienced in configuring and automating Linux environments (particularly Ubuntu Server), as well as cross-platform administration of Windows server environments. I also focus on systems networking and infrastructure security—specifically managing firewalls, ports, and network load balancing. In addition, I build containers as well as create CI/CD pipelines to ensure seamless delivery of the application.

EXPERIENCE / PROJECTS

Thermal First-Person-View (FPV) Drone System

Network and Systems Integration Engineer

- Architected a data pipeline and network communication by interfacing an ESP32 flight controller with a Raspberry Pi Zero 2 W companion computer over a wired UART serial link.
- Established a wireless communication link between the drone and the mobile app by configuring the Raspberry Pi to broadcast its own Wi-Fi network, allowing the mobile client to easily connect to the Flask server.
- Created the system schematic diagrams and documentation detailing the physical wiring, hardware pins, and overall network setup for future reference.

Smart Bin Waste Sorting System

ML & Systems Integration Developer

- Sourced image dataset to train the paper and plastic classification model using Teachable Machine, which was then exported to TensorFlow Lite to develop the Python application logic.
- Collaborated to assemble core hardware components, wiring the Raspberry Pi 3B with the servo motor, I2C LCD, and ultrasonic sensors on a test bench to verify system functionality.
- Created the project documentation and schematics to clearly map out the system architecture and hardware pin connections for academic submission.

RDC Technology Solutions, Inc. – Help Desk Portal

Full-Stack & DevOps Engineer

- Built and deployed a production IT support ticketing system from frontend and backend architecture to final DevOps deployment.
- Developed an Express.js and Node.js backend featuring automated ticket assignment, technician case logging, and role-based access control for Admins, Clients, Technicians, and Helpdesk staff.
- Containerized the application using Docker and deployed it onto a cloud VPS using PM2 for process management, Nginx as a reverse proxy, and Certbot for secure SSL encryption.

Student Sanction Management & Email Notification System

Project Lead & Coordinator

- Led project team in planning and execution of system development for the College of Engineering and Architecture.
- Coordinated responsibilities among members, ensuring smooth collaboration between database, programming, and UI teams.
- Oversaw project timeline and deliverables, ensuring completion within academic deadlines.

Sumobot Robotics – Regional Convention 2025

QA, Assistant Programmer and Designer

- Designed and developed a sumobot for the Regional Convention 2025: 9th CPE Challenge at Saint Mary's University.
- Assisted programming the sumobot in Arduino IDE for autonomous opponent detection, engagement, and boundary awareness.
- Contributed to 3D design of the robot chassis, enhancing mechanical stability and in-ring performance.

Micro-Software Development Club

Secretary (SY 2025-2026)

- Elected as Secretary for the Computer Engineering Department's Micro-Software Development Club.

EDUCATION

Cagayan State University – Carig Sur, Tuguegarao City BS Computer Engineering	2023 – Present
Aurora Senior High School – Aurora, Isabela STEM Strand, Graduated with High Honors	2021 – 2023
- Outstanding Performer in Work Immersion (Capstone) - Outstanding Performer in Communication Arts	

SEMINARS / CONFERENCES ATTENDED

- Regional Information Technology and Engineering (ITE) Summit 2026 at St. Paul University Philippines (July 20-22, 2026): Building Smarter Futures through Technology and Engineering
- Frontiers of Computer Engineering: 2025 International Conference on New and Emerging Technologies (Zoom, Dec 12–13, 2025)
- Regional Convention 2025: General Assembly & 9th CPE Challenge (Feb 2–5, 2025, Saint Mary's University) – Participant, CSU Robotics Team – Sumobot Category

TECHNOLOGIES & SKILLS

DevOps & CI/CD: Knowledgeable on Git for version control, GitHub Actions for continuous integration and delivery of systems, Docker for containerization, Ansible for automated server configuration

Systems & Networking: Proficient in Ubuntu Server for its lightweight, resource efficient system; Experience in administering Windows Server 2008 R2, 2016, and 2022; Nginx for load balancing and reverse proxy

Software Development: Knowledgeable in Python, Vue.js for Frontend, Django and Django REST Framework for Backend, MySQL and PostgreSQL for Database

Embedded Systems Design: ESP32 and Arduino Microcontrollers, Raspberry PI, Embedded C Programming. PCB and Circuit Design

Soft Skills: Can work under pressure, teamwork, adaptability, problem-solving, effective communication, and continuous learning

SCHOLARSHIPS & CERTIFICATES

- CHED Merit Scholarship Program (2023)
- Networking Basics – Cisco Networking Academy (*Course Completion*)
- Networking Devices and Initial Configuration – Cisco Networking Academy (DICT-ITU DTC Initiative) (*Course Completion*)
